

Civica Connect Information Kiosks

These state of the art interactive transactional and presentation kiosks are perfect for point of sale, public internet access, and information display, and are ideally suited for self service retail outlets.

Floor Standing

The v33s provides a slim form factor for locations where space is at a premium. The glass can be green or blue tint, and the edge lighting emphasises any artwork or logos. It can also be provided with a larger 'foot' for environments where it is not possible to affix the unit to a wall, or to the floor.

Slimline kiosk with option panel

Designed to be non-intrusive, this stylish glass model, pictured on the right, has the class and style to fit into both classic and modern styled locations, blending beautifully with the surrounding decor.

The v35 has the following options:

- Web-Cam
- Colour Coded Speaker
- Cut Vinyl Design
- Display Lighting

Slim Glass

v.33 is a stylish, minimalist glass model. Designed to be non intrusive this unit, pictured on the left, has the class and style to fit into both classic and modern styled locations, fitting in beautifully with the surrounding decor.

As shown, the rear shelf is ideal for demonstrating products or offers, or you can simply enhance the aesthetic appeal by using decorative items such as a pot plant.

v.38 - a new direction in kiosk information access with added privacy / security.

The Workstation Kiosk can be fitted with either plain or frosted / coloured panels and built in privacy screen filters.

With many available options including keyboard, trackball, reduced A4 printer and the panel options as mentioned above, the v38 is an extremely versatile kiosk unit. With lots of space available for vinyl livery branding, the unit can be truly customised to either suit its environment or carry a corporate branding.

The **v.36 kiosk unit** is designed to comfortably accommodate wheelchair users, whilst maintaining a stylish design. The large area above the screen is ideal for advertising or identification.

This practical yet elegant kiosk is suitable for a wide range of applications. With its low level access and minimal footprint, it is an ideal solution for any project.

Slimline low level screen kiosk

The v46 is a lectern-style floor-standing kiosk, featuring ultra-modern styling and the ability to support a variety of peripheral devices. The Perspex surround can be provided in blue or green tint, with optional edge lighting and space for a corporate logo or artwork vinyl.

Metal kiosks

V23 metal kiosk

The v23 units are primarily designed to be both safe and robust, whilst incorporating, down to the very basics, a high level of Future Proof technology. Constructed from powder coated steel, and built around standard non proprietary PC technology, with secure rear access panels, maintenance could not be simpler. The most unique feature is the interchangeable option panel, which provide total flexibility in the configuration and functionality. This enables the units to be used for a wide range of applications, especially where high traffic durability is a requirement.

The Kiosk houses a video camera for conferencing or monitoring purposes and for unattended or external use a bullet proof TFT screen and anti vandalism keyboard can also be fitted.

The **v13 stainless steel** floor standing kiosk combines extreme robustness with high functionality and stylish looks, in a slim-line cabinet. The lower area can be used for storage, and the unit can be provided with bullet-proof glass for unattended use.

Wall Mounted

The **V16 wall-mounted kiosk**, compact in design, includes a fully integrated open architecture PC. Although unusually shaped this Kiosk is constructed using non-proprietary components, making maintenance no different to a standard PC. Designed to be non intrusive this unit, pictured on the left, has the class and style to fit into both classic and modern styled locations, fitting in beautifully with the surrounding décor.

Based on the v33S technology, this stylish wall-mount unit can be supplied with a wide range of options, including a vandal-proof keyboard (pictured), a card reader and a receipt printer, providing tremendous versatility in an elegant, slim wall-mount unit.

v33w Wall-mount with keyboard

V32 Wall mount kiosk with option panel

The **v32** can be supplied as a wall mount or pole mount unit.

The facility to utilise the same option panels as the v23 floor-standing metal unit makes the v32 a versatile choice for organisations seeking maximum flexibility and field upgradeability.

Desktop

v22 Desktop kiosk

The **v22 desktop kiosk** offers true portability and a small form factor. The 15" or 17" touch screen is mounted in a green or blue clear surround, and the slim-line PC is mounted behind the screen.

Through Glass

This innovative "Through the glass technology" enables you to give your users or customers 24 hour access to your information or presentation.

The slim-line TFT LCD panel sits behind the touch sensitive glass sheet displaying the information requested.

V15 through-glass

Our design for this through glass kiosk means there is no installation.

It is not necessary for the through glass sensor to be bonded to your window, and the kiosk needn't be permanently installed in one location.

The design has a slight forward tilt, so you simply drop the unit in place, against your window, and members of the public have access to all of your products and services outside of normal business hours.

The v17 brings a new dimension to through-glass kiosks – it is designed to be ceiling hung, suspended from chains. The data and power are supplied from the ceiling, and the PC is mounted behind the screen, with a total thickness of only 12cm.

Concept design

We can work with you to produce bespoke design kiosks that meet your exact needs.

Our product range is constantly developing with new features and functions allowing us to be flexible to your requirements. The kiosk opposite was designed in conjunction with a customer, and will enter production as the v51.

I-Surf browser

The I-Surf User interface was designed as a user friendly control program for use with interactive touch screen kiosk systems. It is compatible with most solid state or conventional PC based kiosk systems, and will also work with some thin client solutions. As well as many additional and very useful features, the software incorporates all of the most important functions required to run a standalone or kiosk network in an unattended mode of operation.

Main Features

- Customisable GUI (Graphical User Interface)
- Advertising with automatic content inclusion. Full screen option
- Additional concurrent Banner Advertising
- Access control for local or on-line content with credit account control
- Email send capabilities, including Photo mail and Video mail
- Coin / Card Payment acceptance and credit account update
- Content Printing facility with control from web page
- Emergency and Customer Service Video Calls
- Undesirable Site Restrictions Facility
- Motion detection to activate specified media
- Remote Reporting for Statistical Data Mining and Usage Tracking
- Modifiable Help display Icons
- Support for latest Internet content and embedded I-Surf commands
- Local Event logging

All our kiosks are manufactured in the UK in small batch runs. Should you require kiosks with different functionality our team of skilled designers can usually develop a custom unit within 6 to 8 weeks, at unbelievably low costs. Several of the above units started life as custom designs, and are now full production units. Please call on **0845 345 4282** for further details on any of the above, or send us an e-mail to sales@civicaconnect.net.
